Here's what to expect from our delivery services:

- You should receive a phone call about five to thirty minutes before arrival.
- Our Delivery team will unbox, set up, level, and connect your appliances. Afterward, they will do a quick test for functionality and inspect for damage.
- The Delivery team will take care of the packaging of the new appliances and will also take away the old. (You can opt out of us taking away the old, just ask!).

Essentials to make sure the delivery goes smoothly:

- Double check the specifications for your appliance on the product page to make sure they will fit as intended.
- Measure any hallways, doorways, and or even stair ways that would be in the path of delivery to help accommodate the appliance's size.
- Please make sure there is an adult there over the age 18+ at time of deliver to sign or verify the delivery.
- Our delivery teams cannot use existing connection parts for the new appliances. We ask you to please turn off the water to that appliance and that the old lines or hoses are disconnected from that appliance piece. We will then hook up the new water hoses for the new machine. (If you are unable to take off the old water hoses or line, please let us know and we will have our delivery team take care of it for you).
- Please make sure that the pathway to where the new appliance is going is cleared of any obstacles (i.e., rugs, furnishings, and personal items).
- Empty any existing appliances you are replacing.
- Ensure outside path for delivery is free of snow, ice, and or any other debris.
